THE GAP

27

Troves open on Mezo mainnet

29,361

People holding MUSD

MAINNET getTroveOwnersCount() on TroveManager, and the MUSD token holder count. Read 16 August 2026.

WHY

You cannot borrow a dollar until you have committed five thousand.

1,800 MUSD

Minimum net debt, before anyone can borrow

0.079346 BTC

What that needs in collateral, about $5,000

PROTOCOL `minNetDebt()` returns 1,800 MUSD. 250% is a responsible ratio, not the 110% liquidation floor.

THE WEDGE

Maren opens the same product at 0.001 BTC.

0.001 BTC

Maren's minimum deposit

79.3×

Lower. Roughly eighty times, not a hundred.

VERIFIED 0.079346 / 0.001 = 79.346. Asserted in packages/sdk/src/position.test.ts against a pinned oracle price.

HOW

One trove.
A ledger inside it.

- **One pooled trove**, opened in MUSD's own TroveManager
- **A per-user ledger** inside it. Collateral is segregated in accounting, not in custody
- **Internal liquidation at 140%**, against the protocol's 110%

THE OTHER TWO FRICTIONS

Gas you do not hold, and nowhere to spend.

- **Gas.** ERC-2771 relaying, with the fee inside the signed payload
- **Spending.** Payments to `@handles`, plus requests, links and splits

The first deposit is payable, so it costs the user gas. Everything after it does not.

IT IS BUILT

Five contracts, live and source-verified.

CONTRACT	ADDRESS
MarenVault	0x46252B00AB59384518d9dB6D1f210ffF1221645b
MarenPay	0xe475Ff919D54E055809f516E3bed8a5c7a101836
MarenRegistry	0x9e123Cdd0CD524812CF9F552d3FAB13d8143b77E
MarenEarn	0xE3B02b215085B99Ce61E0F5ea9763Ac637aa7826
MarenRelayHub	0x22cC1Adfb0C91D9359746dE3F7E8cB7F2B8eA98C

MATSNET 31611 All five verified on Blockscout. 11 transactions, 11,688,063 gas, about 4 nano-BTC.

IT IS EXERCISED

The pooled trove is open and active in MUSD's own TroveManager.

0.048 BTC
Collateral

2,001.84 MUSD
Debt

150.8%
Collateral ratio

ON CHAIN A user deposited 0.001 BTC from their own wallet, tx 0x3b34e664…95e8dd2, block 14,923,865.

WHAT WE FOUND IN THE CHAIN

We read the chain, not the documentation.

0

UserOperations ever processed by the deployed ERC-4337 EntryPoint

$0.0092

What 100,000 gas costs

FINDINGS Zero per the Mezo explorer index. No Mezo RPC implements debug_traceCall, so no compliant bundler can run. Mainnet does accept EIP-7702 type-4 transactions.

WHAT WE ARE GIVING BACK

Four upstream fixes, none of them about Maren.

1. `viem` ships a Mezo mainnet RPC that does not resolve, and omits `multicall3`
2. The Goldsky network slug is `mezo`, not the documented `mezo-mainnet`
3. Three RPC hosts in Mezo's documentation do not resolve
4. Two places where MUSD's documentation and its deployed bytecode disagree

Written, pushed, and awaiting one command each.

HONEST STATUS

What is not true yet.

- **Not audited.** No third party has reviewed a line of it
- **Not on mainnet.** That is gated on the audit, deliberately
- **The relayer is not hosted.** Gasless is implemented and tested, and running nowhere

This is the list we open with, not the one you have to go and find.

THE ASK

$15,000

MUSD, with 40% released
on mainnet deployment

AND TWO ASKS WORTH MORE THAN THE MONEY

Neither of them costs Mezo a dollar.

1. **An introduction to the MUSD auditors.** An auditor already holding MUSD context can review a contract sitting on top of it far more cheaply than one starting cold
2. **Fifty testnet users from the Discord.** Real people find what tests do not

MILESTONES

Four tranches, all verifiable.

MILESTONE	SHARE	AMOUNT
M1 Mainnet deployment	40%	$6,000
M2 Audit complete, findings resolved	25%	$3,750
M3 250 funded positions, $250,000 MUSD borrowed	20%	$3,000
M4 iOS live, sustained for 30 days	15%	$2,250

Every acceptance criterion is checkable on-chain by someone who does not trust us.

Spend Bitcoin. Never sell it.
